

FERRAGENS E ACESSÓRIOS PARA VIDROS TEMPERADOS

Tel.: (11) 5670 - 9900
Edição 2010

A Empresa

Com o intuito de atender uma necessidade existente no mercado de uma empresa com capacidade de produção rápida e com qualidade, surge em 1997, fundada pelo empresário Paulo Hirata e seus colaboradores, a **GLASSPEÇAS IND. E COM. LTDA.** Desde então, a necessidade de inovação e de superação fazem parte da rotina da empresa.

Buscamos desde o início a administração de acordos comerciais com os melhores fornecedores industriais de matéria prima para podermos oferecer constantemente o mais alto padrão de qualidade exigido pelo mercado, atualmente tão carente desta qualidade.

Estruturada, eficiente e com nível de qualidade amplamente reconhecida no mercado, a história da Glasspeças ainda contou com a contribuição decisiva da política comercial implementada ao longo dos anos. Versáteis e focados nas necessidades determinadas pelos clientes a equipe de vendas e o departamento técnico sempre se empenharam em criar soluções adequadas para atender necessidades específicas de grandes, médios e pequenos pedidos em diversos setores da construção, acabamento e engenharia, incluindo de têmperas até pequenas vidraçarias e pequenos e grandes distribuidores, sempre com o mesmo padrão de atendimento.

A Glasspeças conquistou e manteve clientes em todos os diferentes mercados em que atua por mais de uma década, pois sempre esteve ao lado dos seus clientes, agindo não como fornecedor casual, mas de forma profissional, competente e sendo aliada permanente na busca por soluções para cada necessidade.

desde 1997

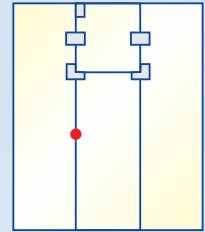

Glasspeças.

Curiosidades

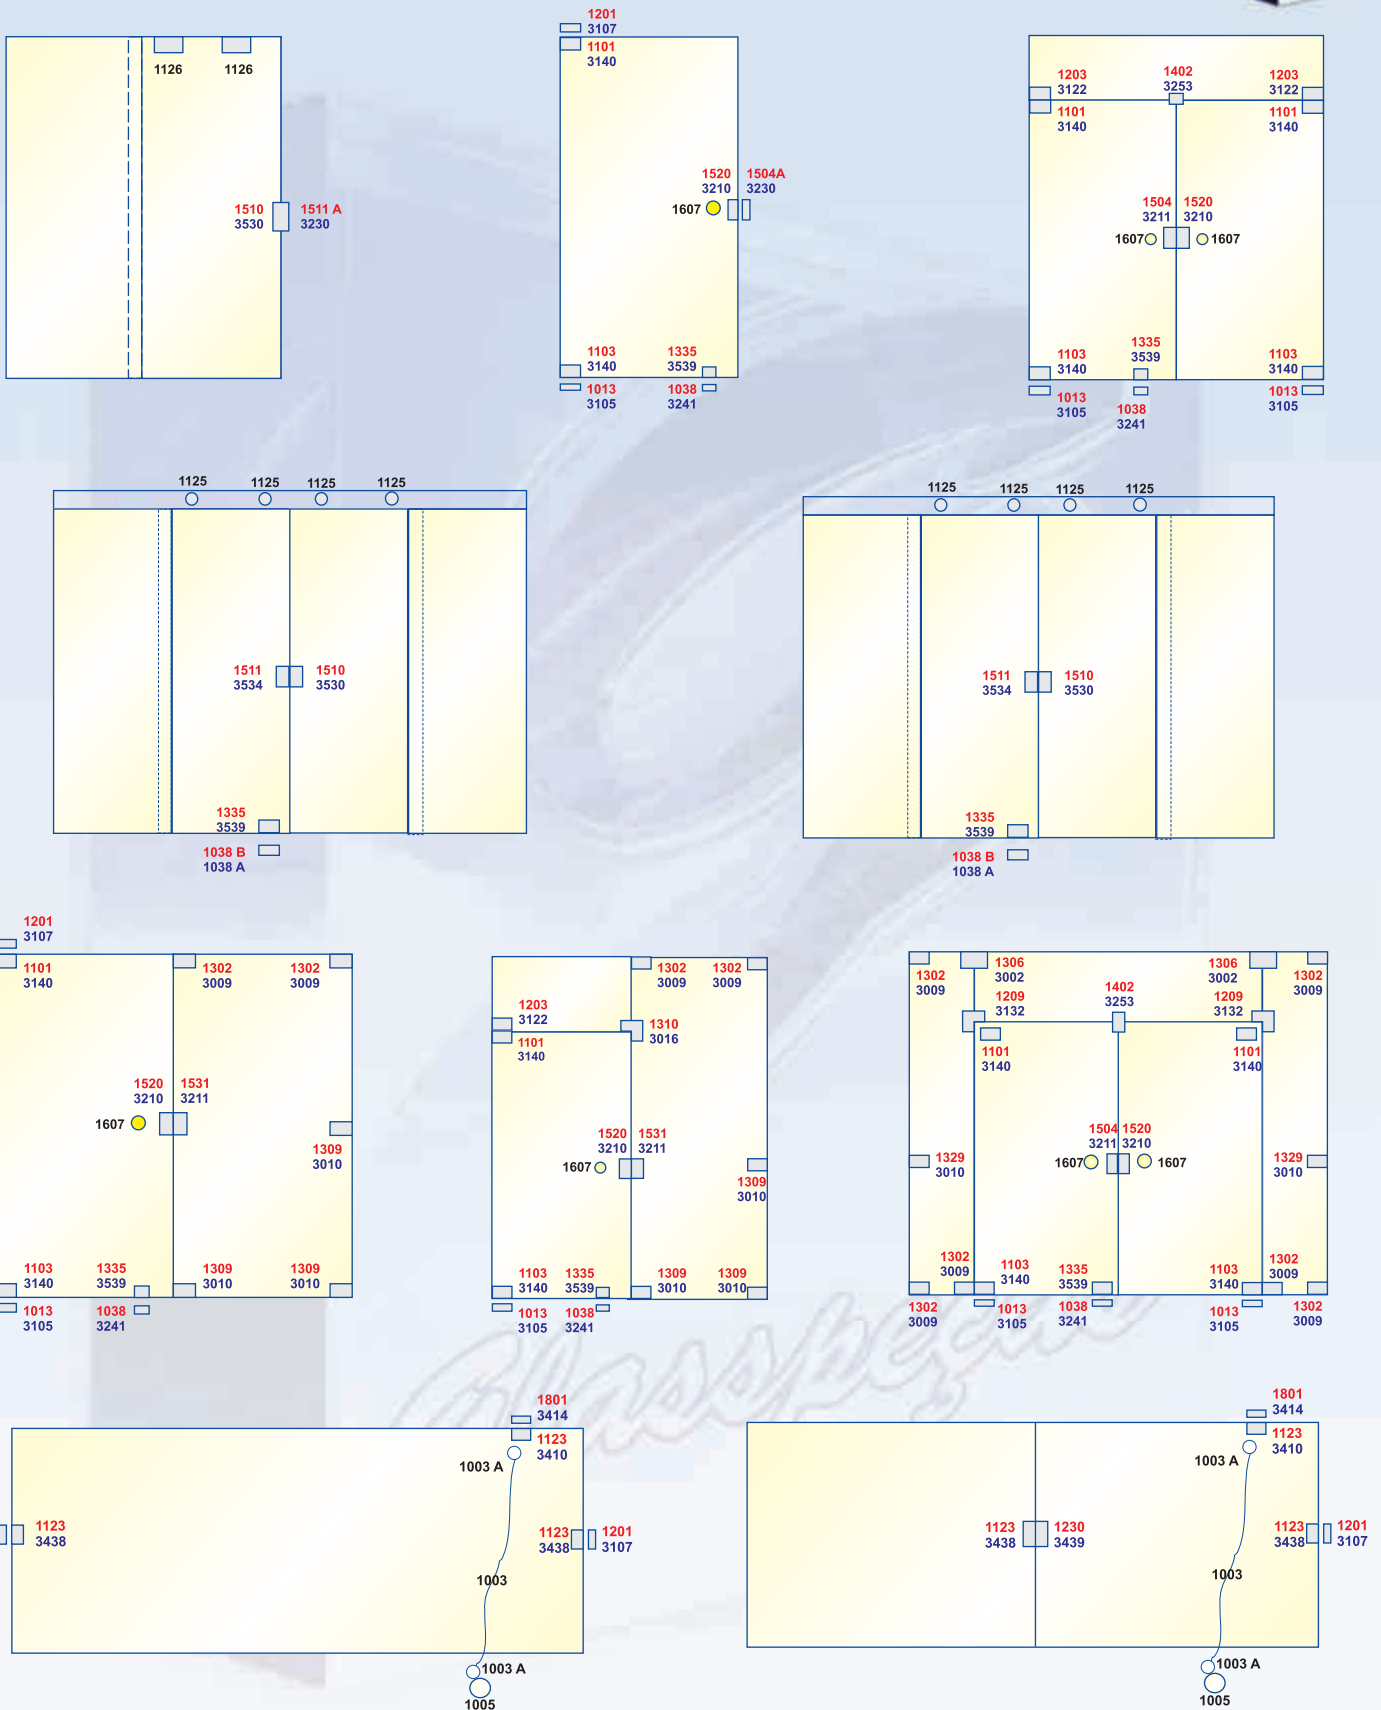

Zamac é uma liga à base de zinco, composto por quatro elementos básicos para sua formação: Alumínio (Al), Cobre (Cu), Magnésio (Mg) e Zinco (Zn). É uma liga muito usada em fundição sob pressão para a produção de pequenas peças com estreito controle dimensional. Possui boa resistência à corrosão, tração, choques e desgastes, e tem uma tonalidade cinza.

Dentre todas as ligas de metais não ferrosos, o Zamac é uma das que possui maior utilização, devido às suas propriedades físicas, mecânicas e à fácil capacidade de revestimento por eletrodeposição (Banho de cromo, níquel, cobre). O seu baixo ponto de fusão permite uma maior durabilidade do molde, permitindo uma maior produção de peças em séries fundidas.

Exemplos comuns de aplicação são as maçanetas metálicas usadas para abrir os vidros das portas dos automóveis, fechaduras residenciais e industriais, carcaças de liquidificadores, batedeiras e ventiladores, dobradiças de refrigeradores, componentes de relógios, grades de rádio e televisores e componentes de ferragens para construção civil e marcenaria.

Para a composição das ferragens da Glasspeças é utilizado o Zamac ZC5T, com 94,306% de Zinco em sua composição.
